The e-commerce web site will be selling books while connecting sellers with customers. HTML serves as the front end programming language in Visual Studio. Java is the primary back end programming language, where SQL is embedded as a form of connecting the user to a relational database.

Sprint backlog for sprint 1

High level priority

Getting started with GITHub. Establishing a minimalistic web-site in Visual Studio for the front end.

Second-level priority

Create an Entity Relationship Diagram (ERD) for a relational database that is applicable with SQL.

Low priority

Creating SQL commands given the variable names that are applicable in MySQL.

Bugs

No current bugs.
